I

HISTORICAL AND GEOGRAPHICAL INTRODUCTION

1. VLACHS

In continental Greece north of Corinth the observant traveller is soon aware of communities of Greek-speaking transhumant shepherds known as Sarakatsani (Σαρακατσάνοι, or Σαρακατσανᾶοι). In the plains it is unnecessary even to leave the main roads to see small groups of circular, domed, huts of wood and thatch, or flocks of sheep and goats guarded by shepherds dressed in rough black suits and immense goat-hair capes woven from the fleeces of their own animals. From May until the first days of November these semi-nomad shepherds graze their considerable flocks on the higher slopes of the mountains, generally 3,000–6,000 feet above sea level; during the remainder of the year they live in the coastal plains. Simple facts of climate and relief, snow on the high ground in winter, in the summer burning heat in the plains, encourage this transhumance in a geographical area physically dominated by the ranges of the Pindus massif and the southern extremity of the Rhodope mountains. Epirus, Thessaly, Macedonia, and Thrace are the provinces in which they are most numerous but communities are found further south in continental Greece and some groups are established in the north of the Peloponnese and Euboea. In the whole of Greece their number, perhaps, approaches eighty thousand,[1] a population which was possibly absolutely greater a hundred years ago, but was certainly relatively more considerable as a fraction of the total inhabitants of the area.

The Greek villagers generally refer to the Sarakatsani simply as Vlachs (βλάχοι), that is shepherds who, in step with the rhythm of the seasons, lead their animals alternately down to the plains and up to the mountains. The occupational reference of the word, Vlach,[2] is an old one, already in use during the Byzantine period.

folklorists and historians struggled with patriotic inventiveness to provide historical and ethnological evidence for the advance or validation of their various national frontiers in areas which under the unity imposed by the Byzantine and Ottoman Empires had become an inextricable patchwork of different ethnic and religious groups. The Sarakatsani were one element in this complex pattern. For under Turkish rule their seasonal migrations had led many of them across limits that were later to become the frontiers of Greece, with Albania, Yugoslavia, Bulgaria, and Turkey.

In these debates the Greeks and their supporters present the more convincing argument. They suggest that if the Sarakatsani were recently hellenized Koutsovlachs they would preserve at least some traces of a foreign origin in their language and customs. But Höeg has shown[11] that neither phonetically, nor in terms of grammatical structure, are there traces of Koutsovlach elements in the dialect spoken by the Sarakatsani. He also claims that the dialects of the Sarakatsani in Epirus, Macedonia, and Thessaly present a linguistic unity.[12] If the various groups of Sarakatsani had, indeed, been recently hellenized one would have expected them to speak the local dialect of the province in which they now find their grazing lands; and this is not the case. And he properly adds to these linguistic arguments information about the different marriage customs of the two groups.[13]

Where Höeg has used linguistic and ethnographic criteria, Mme Chatzimichalis also emphasizes the unity of Sarakatsan art forms,[14] which are simple, static, and geometric, do not vary from one province to another, and in the absence of naturalistic expression differ radically from those of the Koutsovlachs.

But the rebuttals by both these authors of the opinion that Sarakatsani are hellenized Koutsovlachs are only the preliminaries to their own more general theory that the Sarakatsani are the direct descendants of shepherd communities of preclassical Greece—a claim which it is equally difficult to prove

knees, others leaned back against the wall or the divan with a knee cocked up to support an outstretched arm, their fingers allowing the amber beads of a *komboloi* to fall at intervals of a few seconds. All were luxuriously asprawl and akimbo, and the company bristled with shepherd's crooks. They were laid across their laps or tilted at a slope over their shoulders. Some of the shepherds' crooks, staffs grasped by gnarled fists, stood bolt upright; others were propped against the wall; the top of each well-worn shaft was joined to a twirling hook carved in the shape of a dolphin, a dragon, a ram's head, or a snake.

Only a couple of the guests were dressed in black kilts. The others wore rough and hairy black jodhpurs. A few of the wildest and shaggiest were shod in rawhide moccasins tilting up like canoes, worn over swaths of white wool bound about their ankles with broad thongs. All of them wore their soft black skullcaps rakishly askew. Except for the white and pleated bridegroom, who stood by the door receiving horny handshakes and whiskery embraces from the guests, nearly all the people in the room were middle-aged or stricken in years. They conversed at the top of their voices; used to shouting against the wind to each other from hilltop to hilltop, they find it hard to modulate their voices at close quarters, so the smallest talk is stentorian, and the only alternative is a collusive and almost inaudible whisper, to which they suddenly resort if they notice a look of suffering on their interlocutor's face.

THEIR thick rural tones sounded different from those of Thrace. They resembled, rather, the dialect of Roumeli and of parts of Epirus, much further west; an accent which consists of suppressing all final vowels and most of those in the middle of words as well, giving their speech an oddly chopped and consonantal ring. It was made harder to follow by a private vocabulary for the details of their calling. Different kinds of springs, qualities of grass, ways of hut building and bell tuning, breeds of sheep and goats and horses and watchdogs all have special names. They have their own expressions for the tupping, lambing, weaning, shearing, carding, spinning, milking, seething, scalding, path finding, tent pitching, camp striking, trough scooping, and weather divining around which their whole life turns. How should a layman know that the reddish- or dark-faced sheep are called *Katsoúla*, or that belling them is called "ironing" or "arming" them? Or how many *okas* of bronze, and of what pitch, should be slung around the neck of a bellwether? Or that the best time to arm the flocks

differ linguistically. Part of the lure of this Epirus trip was learning more about these people and their way of life.

I had already seen their rounded branch and reed huts, surrounded by wattled sheepfolds, put up either in some isolated, sheltered spot or at the edge of some village I was visiting. Although in Greece they do not number more than ten to twelve thousand families, they stand out picturesquely wherever they are. The men are dressed in tight-fitting black felt trousers and a black waistcoat and usually carry a black hip-length cape slung over their shoulder. They wear a round brimless lambskin cap (*kalpaki*). Many of the nomad women, in contrast to most of the Greek peasant women who now wear variations of Western dress, still keep to their heavy pleated homespun skirts, thick wool stockings, and wide leather belt.

Even such generalizations on dwelling and clothing are dangerous, for there are different nomadic groups. From many conversations with the nomads themselves as well as with others familiar with them, I was able to draw up tentative distinctions. On the basis of language, one can easily divide them into three groups. There are Koutso-Vlachs (the Lame Vlachs) who speak a Latin tongue in the home, although most of them, particularly the men, know Greek; the Arvanito-Vlachs (also called Karagouni because of the black cape they wear) who speak Albanian among themselves, although they still understand the Latin language of the Koutso-Vlachs from whom they derive; and the Sarakatsani, said not to be Vlach at all, who speak Greek as their only language. Many informants told me that the Sarakatsani were among the "purest Greeks" because they had practiced endogamy.

Another way of dividing the nomads is on the basis of type of settlement. The Karagouni and the Sarakatsani are called Skenites (literally, "tent dwellers"), for they do not usually have permanent homes either at their summer or their winter encampment. They build their reed huts anew each year or patch up those that remain usable from the previous year. The Koutso-Vlachs as well as the Greek peasants who practice transhumance (like those of Valtetsi) usually have a permanent village which they call home. In some interviews I found that the Koutso-Vlachs considered their winter home as the permanent settlement and the summer pastures the encampment; but most evidence seemed to indicate the reverse to be true.

The origin of these Koutso-Vlachs is one of the great ethnic puzzles of the Balkans, for their Latin tongue, although greatly corrupted by words from other Balkan languages, follows the four conjugations of ancient Latin. As in most riddles of this sort, nationalistic interests have led to several extravagant claims. Some of the modern Rumanians, chiefly in the old provinces of Moldavia and Wallachia, looked to the south across Bulgaria and what is now Yugoslavia to claim these Romance-language shepherds as long lost brothers to be reunited with the "homeland." They advanced
